Icelandic bridge and machine cancellations 2007 -2018

The publication Íslenskir Stimplar Íslandspóstis HF brúar-, rúllu- og vélstimplar 1998-2007, by Gestur Baldursson and Þór Þorsteins documented the bridge and machine cancels introduced by Íslandspóstur, beginning with the introduction of the new B8b1 cancel to all 91 offices over a period from 1999 to 2006. The following tables are a record of all bridge and machine cancels introduced during the eleven subsequent years up to 2018. A few machine cancels issued prior to 2007 were omitted from the Baldursson/Þorsteins book, and these are also listed in the machine cancel section.

My grateful thanks are to Vilhálmur Sigurðsson, Forstöðumaður, Frímerkjasalan, for his various articles in Frímerkjablaðið, for his advice, and for the provision of many images of various cancels.

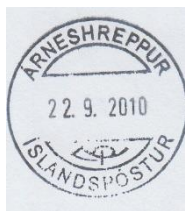

The cancelling device used by all offices since 2006 is the German made Reinart D28c which replaced the older B8b1 cancels issued in 1999. The D28c remains the standard date cancel to the present day. It is doubtful if any of the 1999 cancels are still in use anywhere.

B8b1 (D28c)

Bridge cancels B8b1

Only one new Reinart D28c canceller has been issued since the general issue of 2006.

Árneshreppur	28.01.2010	

Colop R40D rubber cancellers B8b1b*- 2014-2018

Beginning in October 2014, a new variation of type B8b1 was made available, but only to offices who requested one. Called the Colop R40D, it was intended as a standby cancel to be used whenever the standard B8b1 cancels issued from 2006 became worn and needed repair. Unlike the earlier steel cancels these are of rubber and intended to provide a better impression. The new cancels are different in two ways. The most striking difference can be seen in the design of the date. Also the diameter is 28mm compared to the previous cancels which ranged between 29mm down to a more recent 27mm, depending on the date of manufacture. The change of size makes the positioning of the text look different on the new cancels.

* The Baldursson/Þorsteins book introduced a separate classification B8b1a for the cancel heads used by the philatelic service in Reykjavík, for collectors. These devices were not issued to the post offices, but their classification B8b1a cannot be disregarded. It is suggested therefore that the classification B8b1b should be adopted to describe the new Colop R40D.

B8b1b	Post Office	Period of use	Remarks
	Akranes	08.01.2015	2 nd cancel issued May 2015 Two identical cancels in use.
	Akureyri 600 (Post Terminal) Norðurtangi	08.05.2015	3 identical cancels in use

Machine cancellers 2000-2007

Vél M8: Frama Electron

Two type M8 Frama Electron cancelling machines have been identified at Egilsstaðir and Húsavík. They were previously meter franking machines (Frímerkingarvélar) at Reykjavík, later converted into cancelling machines. A third machine was used at Keflavík. None have the Íslandspóstur logo.

Known used circa 2003 – 2010 with or without Christmas slogan

No Christmas slogan

Known used circa 2005 – 2011

The regular Keflavík machine canceller was broken in December 2000 and as a temporary stop-gap they used a meter cancelling machine license no.1134. The value tablet was filled with zeros. It is only found in red ink, and copies are known from 10.12.2000 to at least December 2001.

The same machine appeared in late 2002 and early 2003 both with and without the Christmas slogan and minus the meter tablet. Black ink was used. It could not have been used after the office name changed to Reykjanesbær on 25.8.2003

2003. No Christmas slogan .

Vél M8: Hornafjörður

This was introduced too late to be included in the 2007 Gestur Baldursson and Þór Þorsteins book. The illustration is shown in Frímerkjablaðið Nr. 18, in a piece by Þór Þorsteins.

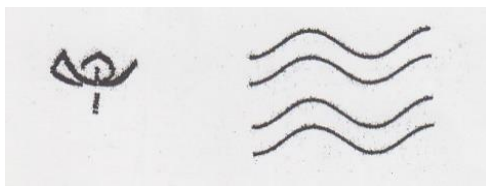

Dated 17.10.07

2008

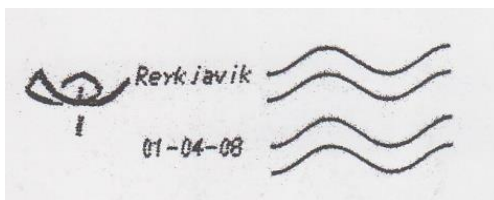

Vél M5: Reykjavík 2

The following three cancels were announced in Frímerkjablaðið Nr. 18 in late 2008. The dates of their introduction and subsequent use are unknown.

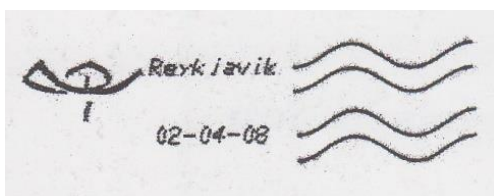

The previous cancel head had to be reset for the following variations.

Without the year 2008

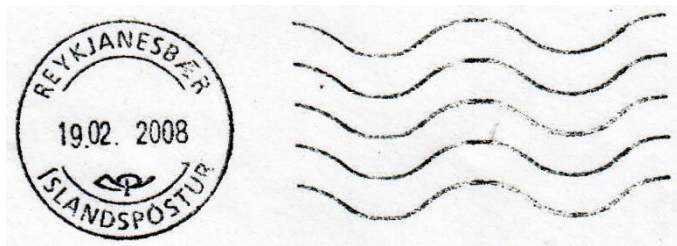

Short setting 57mm 2008

Long setting 62mm 2008

Vél M7: Reykjanesbær

Similarly announced in Frímerkjablaðið Nr. 18, the date of introduction is unknown. The example shown is 2008.

Horizontal bars missing, unlike the 2006 cancel

2011

Vél : M7 Pitney Bowes DM type 1000 at Reykjavík 2

This began the process of replacing 9 old Paragon cancelling machines, eight in Reykjavík and one in Akureyri. Two machines installed in May 2011 and 2 in September, all identical.

Without wavy lines

With wavy lines on the left

Wavy lines on both sides

2012

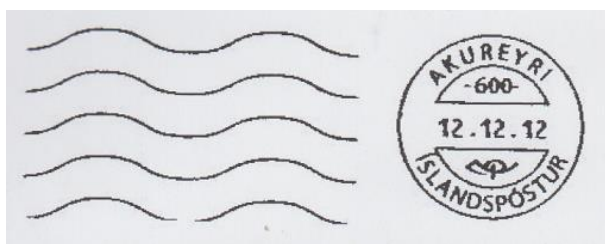

Continuation of the programme to replace the old Paragon cancelling machines.

**Vél : M7 Pitney Bowes DM type 1000 at Akureyri with postcode 600
Introduced from March 2012**

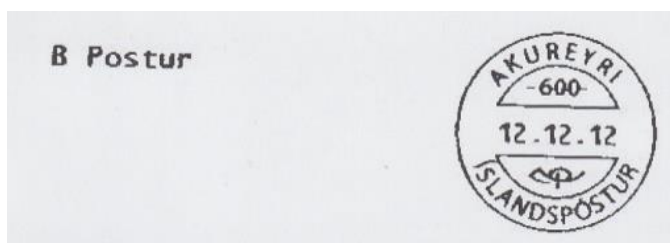

Normal diameter.

Without wavy lines
A-póstur

Wavy lines to the left
